

Protechsoft webtech notes

1. What is HTML?

HTML stands for **HyperText Markup Language**.

It is used to create the **structure of a webpage**.

Why is it called HyperText?

- **Hypertext** means text that contains link for any other page.
- HyperText allows users to navigate between pages using links.

Why is it called Markup Language?

- HTML uses **tags** to mark and structure content.
- These tags tell the browser how to display content.

1. What is HTML?

Ans: HTML stands for HyperText Markup Language. It is used to create the structure of webpages.

2. Why is HTML called a markup language?

Ans: Because it uses tags to mark and structure content.

3. What is HyperText?

Ans: HyperText is text containing links that allow navigation between webpages.

4. HTML Tags

Tags are predefined keywords enclosed within angle brackets.

Syntax

`<tagname> Content </tagname>`

Example

`<h1>Hello World</h1>`

5. What is a tag?

Ans: A tag is a predefined keyword used to define HTML elements.

6. What are opening and closing tags?

Ans:

<h1> Opening Tag

</h1> Closing Tag

7. Structure of HTML

Basic Structure

```
<!DOCTYPE html>
<html>
<head>
    <title>My Page</title>
</head>
<body>

</body>
</html>
```

Components

Tag	Purpose
<!DOCTYPE html>	Declares HTML5
<html>	Root element
<head>	Contains metadata
<body>	Contains visible content

Interview Questions

Q1. What is the root tag of HTML?

Ans: <html>

Q2. Which section contains visible content?

Ans: <body>

Q3. What is the purpose of <!DOCTYPE html>?

Ans: It tells the browser that the document uses HTML5.

8. Heading Tags

Used to provide headings and titles.

Tags

`<h1></h1>`

`<h2></h2>`

`<h3></h3>`

`<h4></h4>`

`<h5></h5>`

`<h6></h6>`

Note

- `<h1>` is the biggest heading.
- `<h6>` is the smallest heading.

Interview Questions

Q1. How many heading tags are available in HTML?

Ans: 6 heading tags (h1 to h6).

Q2. Which is the largest heading tag?

Ans: `<h1>`

Q3. Which is the smallest heading tag?

Ans: `<h6>`

9. Meta Tag

Used to provide extra information about the webpage.

Example

```
<meta charset="UTF-8">
```

```
<meta name="viewport" content="width=device-width, initial-scale=1.0">
```

Q1. What is the purpose of the meta tag?

Ans: It provides additional information about the webpage.

10. Title Tag

Used to provide a name for the browser tab.

Example

```
<title>Protechsoft Grooming</title>
```

Q1. Where is the title displayed?

Ans: In the browser tab.

11. Current Version of HTML

Current version is **HTML5**.

12. Elements and Types of Elements

What is an Element?

Combination of opening tag, content, and closing tag.

Example

```
<h1>Hello Students</h1>
```

Inline Elements

- Display content in the same line.
- Height and width cannot be applied effectively.

Examples

```
<b>hi</b>  
<i>bye</i>  
<u>hello</u>
```

Block-Level Elements

- Start on a new line.
- Occupy full width available.
- Height and width can be applied.

Examples

```
<h2> all the best for protechsoft interview</h2>  
<p>this is paragraph tag</p>
```

Inline-Block Elements

- Display in the same line.
- Height and width can be applied.

Examples

```
<button>submit</button>  
<button>reset</button>  
<input type="text">
```

hi *bye* hello

all the best for protechsoft interview

this is paragraph tag

submit	reset	
--------	-------	----------------------

Q1. What is an HTML element?

Ans: Combination of tags and content.

Q2. What is an inline element?

Ans: An element displayed in the same line.

Q3. Give examples of inline elements.

Ans: , <i>, <u>.

Q4. What is a block-level element?

Ans: An element displayed on a new line.

Q5. Give examples of block-level elements.

Ans: <h1>, <p>.

Q6. Give examples of inline-block elements.

Ans: <button>, <input>.

13. Formatting Tags

Used to change the appearance/format of text.

Tag	Purpose
	Bold
<i>	Italic
<u>	Underline
	Strike Through
<mark>	Highlight

Example

```
<p> we are the student of <b>qspiders</b> </p>
<p> we are the student of <u>qspiders</u> </p>
<p> we are the student of <i>qspiders</i> </p>
<p> we are the student of <del>qspiders</del> </p>
<p> we are the student of <mark>qspiders</mark> </p>
```

Interview Questions

Q1. Which tag is used for bold text?

Ans:

Q2. Which tag is used for underline?

Ans: <u>

Q3. Which tag is used to highlight text?

Ans: <mark>

Q4. Which tag is used to strike content?

Ans:

we are the student of ~~qspiders~~

we are the student of qspiders

we are the student of *qspiders*

we are the student of ~~qspiders~~

we are the student of **qspiders**

14. Image Tag

Used to add images.

Syntax

```

```

Attributes

Attribute	Purpose
src	Image path
alt	Alternate text
height	Height of image
width	Width of image

Example

```

```

Q1. Which tag is used to add an image?

Ans:

Q2. What is the purpose of src?

Ans: It specifies the image path.

Q3. What is the purpose of alt?

Ans: It displays alternate text if the image fails to load.

15. Lists

Used to group related items together.

Q1. How many types of lists are there in HTML?

Ans: 3

Q2. What are they?

Ans:

1. Ordered List
2. Unordered List
3. Description List

Q3. Which tag is used to create list items?

Ans:

Ordered List

```
<ol >
  <li>html</li>
  <li>css</li>
  <li>javascript</li>
</ol>
```

Output:

1. html
2. css
3. javascript

```
<ol start="50">
  <li>html</li>
  <li>css</li>
  <li>javascript</li>
</ol>
```

Output:

50. html
51. css
52. javascript

```
<ol start="50" reversed>
  <li>html</li>
  <li>css</li>
  <li>javascript</li>
</ol>
```

Output:

```
50. html
49. css
48. javascript
```

```
<ol type="I" >
  <li>html</li>
  <li>css</li>
  <li>javascript</li>
</ol>
```

Output:

```
I. html
II. css
III. javascript
```

Unordered List

```
<ul>
  <li>html</li>
  <li>css</li>
  <li>javascript</li>
</ul>
```

Output:

- html
- css
- javascript

Description List

```
<h2> description list </h2>

<dl>
  <dt>html</dt>
  <dd>hyper text markup language</dd>
</dl>

<dl>
  <dt>santanu</dt>
  <dd>I am webtech and java trainer in qspiders</dd>
</dl>
```

description list

```
html
  hyper text markup language

santanu
  I am webtech and java trainer in qspiders
```

Tags

Tag	Purpose
dl	Description List
dt	Description Term
dd	Description Data

16. Marquee Tag

Used to create scrolling text.

Example

```
<marquee>
  Welcome Students
</marquee>
```

Attributes

Attribute	Purpose
direction	Change direction
behavior	scroll, alternate
scrollamount	Speed

```
<marquee behavior="alternate" direction="right" scrollamount="30">
```

```
<h1>Interview Update : Tuesday (09/06/2026) you will be having  
protechsoft Interview</h1>
```

```
</marquee>
```

Q1. What is the purpose of marquee tag?

Ans: To create scrolling text.

Q2. What are the values of behavior attribute?

Ans: scroll, alternate.

17. Iframe

Used to display another webpage inside the current webpage.

Syntax

```
<iframe src="page.html"></iframe>
```

Uses

- Add websites
- Add YouTube videos
- Add Google Maps

Q1. What is an iframe?

Ans: It is used to display another webpage inside the current webpage.

Q2. Can we embed YouTube videos using iframe?

Ans: Yes.

Q3. Can we embed Google Maps using iframe?

Ans: Yes.

```
<iframe src="https://en.wikipedia.org/wiki/HTML" frameborder="0" height="500"
width="800"></iframe>

<iframe width="560" height="315" src="https://www.youtube.com/embed/Tp5G3zrRTQ0?
si=0_vXlY20kUNTW2om" title="YouTube video player" frameborder="0" allow="accelerometer;
autoplay; clipboard-write; encrypted-media; gyroscope; picture-in-picture; web-share"
referrerpolicy="strict-origin-when-cross-origin" allowfullscreen></iframe>

<iframe width="560" height="315" src="https://www.youtube.com/embed/MNGAiltanyI?
si=L_ymPaNtIZDaoqks" title="YouTube video player" frameborder="0" allow="accelerometer;
autoplay; clipboard-write; encrypted-media; gyroscope; picture-in-picture; web-share"
referrerpolicy="strict-origin-when-cross-origin" allowfullscreen></iframe>
```

18. Table

A table is a combination of rows and columns.

Tags

Tag	Purpose
table	Creates table
tr	Creates row
td	Creates data cell
th	Creates heading cell

Example

ename	eid	sal
miller	101	12345678
scott	102	7654321

```

<table border="1" width="400">
  <tr>
    <th>ename</th>
    <th>eid</th>
    <th>sal</th>
  </tr>

  <tr>
    <td>miller</td>
    <td>101</td>
    <td>12345678</td>
  </tr>

  <tr>
    <td>scott</td>
    <td>102</td>
    <td>7654321</td>
  </tr>
</table>

```

name	age
Ajay	24
priya	

```

<table border="1" width="300">
  <tr>
    <th>name</th>
    <th>age</th>
  </tr>

  <tr>
    <td>Ajay</td>
    <td rowspan="2">24</td>
  </tr>

  <tr>
    <td>priya</td>
  </tr>
</table>

```

name	expense
Arun	\$8
Priya	\$9
sum \$17	

```

<table border="1" width="300">
  <tr>
    <th>name</th>
    <th>expense</th>
  </tr>

  <tr>
    <td>Arun</td>
    <td>$8</td>
  </tr>

  <tr>
    <td>Priya</td>
    <td>$9</td>
  </tr>

  <tr>
    <td colspan="2"> sum $17</td>
  </tr>
</table>

```

Rowspan

Used to merge multiple rows.

```
<td rowspan="2">24</td>
```

Colspan

Used to merge multiple columns.

```
<td colspan="2">Total</td>
```

Q1. Which tag creates a table?

Ans: <table>

Q2. Which tag creates rows?

Ans: <tr>

Q3. Which tag creates table data?

Ans: <td>

Q4. Which tag creates table headings?

Ans: <th>

Q5. What is rowspan?

Ans: It merges multiple rows.

Q6. What is colspan?

Ans: It merges multiple columns.
